## I Just Got My First Dumpster Job — Now What? The Complete Delivery Guide

The call came in. The customer booked. The deposit is collected. Now you need to deliver a dumpster, manage the rental, pick it up, dump it, and come out the other side with a satisfied customer and a positive review.

Here's exactly how to handle every step — from the moment you confirm the booking to the moment you ask for that Google review.

### Step 1: Confirm the Booking (Immediately After Booking)

The moment a job is booked, send a confirmation — whether by text, email, or both.

Your confirmation should include:

- What was booked: container size, delivery address, rental start date

- What's included: rental duration, included tonnage
- What's not included: prohibited materials, overage rates, extension rates
- Your contact number for questions

A good confirmation template:

\*"Thanks for booking with [Your Business Name]! Here's what we've got confirmed:

Container size: 14-yard

Delivery address: [address]

Delivery date: [date]

Rental period: 7 days

Included: up to 1.5 tons

Overage: \$110/ton over

Extension: \$50/day if needed

Not accepted: tires, paint, hazardous materials, electronics

Questions? Call or text [number]. See you [delivery date]!"\*

This confirmation does three things: confirms the details are correct, sets the customer's expectations for fees, and gives them a channel to reach you if anything changes.

## Step 2: The Day-Before Confirmation

The day before delivery, send a short reminder:

*"Just a reminder — your dumpster arrives tomorrow. Delivery is between [time window]. Please make sure we have clear access to [location]. Any questions, call [number]."*

This dramatically reduces no-access situations — arriving at a job site only to find a locked gate, a car blocking the drop spot, or a customer who forgot about the delivery.

It also signals professionalism. Most dumpster rental operators don't do this. The ones who do get better reviews.

## Step 3: Assess the Job Before Delivery

Before you load up and drive, take 2 minutes to review the job:

**What's the material?** If the customer said "general cleanout," you're probably fine. If they mentioned "dirt" or "concrete," you need to know your container weight limits and your landfill's rate for heavy materials — before they fill it and you're stuck with a load that exceeds your limit.

**What's the access situation?** Tight driveways, low-hanging branches, narrow gates — these can all create problems on arrival. If the address looks tricky on Google Street View, call the customer and ask specifically about access before you load up.

**Any permit requirements?** If the container is going on a public street or sidewalk (common in urban areas), some municipalities require a permit. Know your local rules.

## Step 4: The Delivery

Arrive in the window you promised. Not 3 hours early, not 2 hours late.

### Positioning the container:

- Work with the customer to identify the best placement — not just convenient for you, but actually usable for them
- Protect the surface: Place boards or rubber pads under the container skids if you're dropping on asphalt or concrete in warm weather. Dumpster skids can leave marks or damage soft asphalt. This is a detail most operators skip and customers remember
- Stable and level: The container should sit flat. A container sitting at a significant angle is harder to use and harder to pick up safely
- Clear of overhead obstructions: Check for low-hanging utilities, branches, and awnings before positioning

### Document the delivery:

Take photos before you leave:

- The container in position

- The condition of the driveway/surface around it
- Any pre-existing damage to the property nearby

These photos protect you if a customer later claims the delivery caused damage.

### **The conversation at delivery:**

If the customer is present, take 2 minutes to confirm:

- What goes in (and what doesn't)
- Pickup scheduling — when do they expect to be done?
- Your contact number for questions

A 2-minute conversation prevents 90% of customer service problems.

## **Step 5: Mid-Rental Management**

You've delivered the container. Now you wait — but not passively.

### **Day 2 to 3 check-in (for weekly rentals):**

For jobs lasting more than a few days, a quick text check-in shows customer service and surfaces problems before they become complaints:

*"Hey [Name], just checking in — is the container working out okay? Let me know if you need anything adjusted."*

### **Monitor for extension needs:**

Some customers start filling a container and realize they need more time or a second dump. Being proactive about this (asking mid-rental if they need an extension) is better than the customer assuming they can just keep it for free.

### **Prohibited material monitoring:**

If you're in a market where residential customers sometimes add prohibited materials (tires, paint, batteries), make your prohibited list clear at booking AND at delivery. If you pull a load and get hit with a hazardous waste fee at the landfill, it's significantly more painful than having the conversation early.

## **Step 6: Pickup Scheduling**

A day before the scheduled pickup, confirm:

*"Planning to pick up your container tomorrow. Still good for that timing? If you need an extra day or two, let me know and I'll adjust the schedule."*

This confirmation serves multiple purposes:

- Ensures you're not picking up before the customer is done
- Catches extension requests before they become disputes
- Gives the customer a chance to add a final load the morning of pickup

### **Pickup day:**

Arrive in the window you promised. Inspect the load before hooking up:

- Is there anything obviously prohibited? Better to have the conversation on-site than at the landfill
- Is the container overfilled or overweight? Note it before pickup — this is when you confirm any overage charges
- Take a photo of the loaded container before pickup. This is your record if there are weight or material disputes later.

## **Step 7: The Dump**

Know your landfill before your first job. This means:

- Hours of operation (many close by 4 or 5 PM)
- Which materials they accept
- Rate structure (per ton, minimum charges, surcharges)
- Scale procedure — do you weigh in and out? Or pay flat rate?

Weight tickets are your documentation. Keep them organized by job. They're essential for billing customers on tonnage-based contracts and for your own cost tracking.

## **Step 8: The Follow-Up (24 Hours After Pickup)**

This step separates operators who get reviews from operators who don't.

Within 24 hours of pickup, text the customer:

*"Hey [Name], just wanted to make sure everything worked out well with your project. Hope the container was helpful! If you have a moment, a quick Google review would mean a lot to us — here's the link: [direct Google review link]. Thanks!"*

The timing matters. 24 hours after pickup is when the job is fresh, the customer's relief at getting the debris gone is still warm, and they're most likely to have 2 minutes to leave a review.

At a 15% conversion rate, 20 jobs per month generates 3 reviews per month. Over 12 months: 36+ reviews. That review base becomes one of your most valuable business assets.

## The Complete Job Checklist

- ☐ Booking confirmation sent immediately after booking
- ☐ Day-before delivery reminder sent
- ☐ Access and material confirmed before departure
- ☐ Container placed correctly, surface protected, delivery documented with photos
- ☐ Two-minute conversation with customer if present
- ☐ Mid-rental check-in text sent (day 2 to 3 for weekly rentals)
- ☐ Day-before pickup confirmation sent
- ☐ Pickup documented with photo of loaded container
- ☐ Landfill weight ticket saved
- ☐ Any overage charges communicated to customer promptly
- ☐ Follow-up text with review request sent within 24 hours of pickup

This checklist takes a few minutes per job to execute. The operators who run it consistently have better reviews, fewer disputes, and more repeat customers than those who don't.
